Size

18,749 SQM / 平米

Award

BIM Award 2013 / BIM设计奖

Overlooking this three-layer building, the Taicang Planning Exhibition Hall references a traditional Chinese image of two fishes circling one another, representing Taicang's prosperity and the city's continued good fortune. The building is connected dramatically by a huge glass woven steel lighting roof, suspended across the central atrium. Two curved net canopies wrap up the building from top to the ground that intensively prominent the unique shape. The combination of glass wall of varying degrees of transparency is employed throughout the building, maximizing the natural lighting and providing with a view of surrounding green and water resources. Two arcades extend from exhibition center entrance to the commercial space, landscape square and the amphitheater that realizes the connection of all the main featured buildings of this project. The architectural design of commercial buildings combines with the application of simple geometrical elements but evokes the simplicity and elegance of the integral building style.

从空中俯看这座三层楼高的建筑，太仓市规划展示馆宛如一幅中国传统画双鱼嬉戏，象征了太仓丰富的自然资源和城市的繁荣发展。整体建筑用巨型钢结构玻璃采光顶覆盖整个中庭区。两片鱼形网壳幕墙将建筑主体从下到上半包裹着，凸显了整体造型的独特魅力。玻璃幕墙的组合运用最大程度地实现自然采光，也使整座建筑从各个角度提供了欣赏自然绿色和水景资源的最佳视野。两条从展示中心入口延伸至商业空间、景观广场和露天剧场的水上走廊实现了建筑主要功能的连接。后方商业建筑体设计理念运用了极其简单的几何元素，使整片区域各个建筑群主体风格呼应，简约气派。
